

Jean Crosetti is the co-founder and CEO of Bubble Robotics, a frontier maritime robotics company building coordinated fleets of autonomous surface and subsea systems (USVs, ROVs, and AUVs) for offshore inspection, ocean monitoring, and maritime security.

Bubble is building the ocean's autonomous workforce: a persistent, general-purpose robotic platform that operates across the surface and subsea, cutting the industry's reliance on costly crewed vessels and giving operators continuous awareness of critical subsea environments. Its systems inspect offshore energy infrastructure, protect ports and strategic assets, and work in remote and contested waters, including mine countermeasures and anti-submarine warfare.

Based across Zurich, Paris, and San Francisco, Bubble sits at the intersection of offshore energy, ocean science, and dual-use defense. Jean is a repeat entrepreneur and former venture investor.
